

# Hit'n'Mix Infinity 4.5

Infinity 4.5 now offers the ability to rip and export video and MIDI files, import and paint your own samples into rips via the Instrument Palette, auto-detect and set BPMs, tempo, scales and keys and remove noise. "Infinity is the culmination of 17 years of research and we're really excited to be offering a new audio editor that unlike other editors, doesn't work on samples and waveforms, but instead breaks down the audio into the individual components of frequency, amplitude and harmonics. This enables you to change most characteristics without any kind of limit, hence the name Infinity!" said CEO Martin Dawe. €269 with a free trial available.
